DETAILED ACTION

It should be noted that upon further consideration of claims indicated allowable in advisory action mailed 3/18/2004 the examiner has withdrawn such indication of allowability. The following restriction requirement now applies.

It should be noted that claim 38 depends from a canceled claim.

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I Claims 2-5, 7-9, 62-75, 82, 83 drawn to system having controller that includes current limiting/detecting device, classified in class 175, subclass 4.54.

Group II Claims 29-33, 35-40, 79,80, drawn to method for storing inventory identifiers, classified in class 705, subclass 28.

Group III Claim 41, drawn to a method for storing a distance between a casing collar locator and one or more shots, classified in class 166, subclass 250.01.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group II and Group I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process.

Art Unit: 3673

(MPEP § 806.05(e)). In this case the apparatus can perform a different process meaning one lacking the storing of inventory identifiers.

3. Inventions Group III and Group I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process.

(MPEP § 806.05(e)). In this case the apparatus can perform a different process meaning one lacking the storing of information regarding the distance between a casing collar and one or more shots.

4. Inventions Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group II has separate utility such as storing inventory identifiers and Group III has separate utility such a storing distances between a casing collar and one or more shots. See MPEP § 806.05(d).

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

In the event applicant elects Group I, Group I is further restricted since they are distinct species claimed.

6. This application contains claims directed to the following patentably distinct species of the claimed invention: Species I drawn to current detector device and Species II drawn to current limiting device

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 3673

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sunil Singh whose telephone number is (703) 308-4024. The examiner can normally be reached on Monday through Friday 8:30 AM-5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Shackelford can be reached on (703) 308-2978. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
